Letter of Interest

Bento Box Research — Rolling Foundational UX Research

April 2026

I, Jaladhi Pujara, am writing in a personal capacity to express my interest in piloting Bento Box Research, a rolling foundational UX research platform developed by Jesse Livingston.

Based on my experience leading design for a product-led SaaS company, I believe this approach addresses a genuine gap in how product teams maintain an ongoing understanding of user experience between formal research engagements. I would welcome the opportunity to pilot this with a product area at my company. I currently lead UX for a product-led SaaS company and have direct experience with the research gaps this product addresses.

What Bento Box Research Does

Bento Box Research uses AI-driven interview agents to conduct rolling foundational research with real users, producing a continuous UX health score across four dimensions: Ease, Trust, Value, and Delight.

Proposed Pilot

The pilot would run for 60 days on a single product area of my choosing. During the pilot, Bento Box Research's founder and lead researcher would:

- Monitor scores and review all qualitative interview data for quality and insight
- Deliver biweekly insight reports interpreting score trends and surfacing key findings
- Conduct a final readout summarizing patterns, findings, and recommendations
- Work directly with the team to ensure insights drive product decisions

Findings would be shared through a dashboard including live health scores, user quotes, and full interview transcripts.

Pilot Investment

$1,000 flat fee for the 60-day pilot. This is a discounted pilot rate; standard pricing applies to any continuation beyond the pilot period.

What I Would Provide

To support a successful pilot, I would plan to:

- Identify a potential internal sponsor or point of contact, contingent on internal approvals
- Explore internally whether a pilot deployment is feasible, subject to my company's security, privacy, and procurement review process
- Participate in a kickoff call, periodic check-ins, and a final readout
- Provide feedback on the pilot experience and the value of insights delivered

Non-Binding

This letter reflects my personal professional interest in exploring Bento Box Research's approach through a pilot engagement. It is not a binding commitment on behalf of my company and does not create enforceable obligations for either party. A formal agreement would be executed prior to pilot kickoff if both parties choose to proceed.
